Title	DEVELOPMENTAL EVALUATION OF THE SAFE FOR HI EVALUATION TOOL, PEER REVIEW PROCESS AND PILOT – A STUDY SERIES OF THE SAFE FOR HI PROJECT
Type	Oral Presentation <i>Innovative Ways for Community Mobilization and Engagement of Stakeholders</i>
1st Author	ALEX ANAWATI
Co-Authors	Erin Cameron
Country	CANADA
Abstract N ^o	TUFH616
Content	<p>This presentation will focus on the findings from developmental evaluation methodology and articulate the strengths of using developmental evaluation as an innovative strategy for mobilizing and engaging different stakeholders in the Social Accountability as the Framework for Engagement for Health Institutions Project (SAFE for HI Project). Developmental evaluation was interwoven throughout the successive study series of the SAFE for HI Project, including during the development of the SAFE for HI Evaluation Tool, The SAFE for HI Evaluation Tool Peer Review Process and the SAFE for HI Evaluation Tool Pilot in an Academic Health Sciences Centre Emergency Department. Developmental evaluation was designed to ‘check-in’ with what was going well, what was not going well and what needed to change. The methods included interviews with research team members and study participants, collection of research team meetings agendas, minutes, email correspondence and researcher notes. All data underwent a thematic analysis. Developmental Evaluations were particularly helpful to this process and identified enablers, facilitators, and barriers to the development and use of the SAFE for HI Evaluation Tool, peer review process and through its piloting, which will be presented and discussed in this oral poster presentation.</p>
